

2023 CEA-VTT days dedicated to antibodies

The **CEA and VTT**, sponsors of the NCBJ through the **European NOMATEN project** and the center of excellence (CoE) of the same name, have organized two scientific days in March and June 2023 on the general theme of antibodies, as well as visits of their installations.

The first exchange took place **in Espoo, Finland (VTT FutureHub (FuHu) building), on March 9 and 10, 2023**, and enabled a CEA delegation (9 people) to discover the Biosensor group's development laboratories and associated antibody production unit (Fermentor Hall).

The return match was held at **the CEA in Saclay on June 27 and 28, 2023**, on the premises of the **SPI (DMTS)**, and enabled an 8-person Finnish delegation to discover some of the research themes of the Joliot Drugs and Technologies for Health department, the **SCBM, SIMoS and SPI laboratories**, not forgetting a virtual visit to Li2D (Marcoule).

There's no doubt that these first two scientific days will be followed up **by joint projects**, as well as **staff exchanges** on certain topics and equipment (microfluidics, cell sorting).
